Introduction

เป็นฐานข้อมูลที่รวบรวมวิทยานิพนธ์ระดับปริญญาโท และปริญญาเอก จากสถาบันทางการศึกษาที่มีชื่อเสียงในประเทศสหรัฐอเมริกาและแคนาดา รวมถึงบางสถาบันการศึกษาจากทวีปยุโรป ออสเตรเลีย เอเชีย และแอฟริกา มากกว่า 1,700 แห่ง ประกอบด้วยวิทยานิพนธ์มากกว่า 2.7 ล้านชื่อเรื่อง ซึ่งให้บริการรูปแบบฉบับเต็ม (Full Text) มากกว่า 1.4 ล้านชื่อ ย้อนหลังตั้งแต่ปี 1997 – ปัจจุบัน

- ให้ข้อมูลบรรณานุกรมวิทยานิพนธ์ระดับปริญญาเอกตั้งแต่ปี 1637
- ให้ข้อมูลบรรณานุกรมพร้อมสาระสังเขปวิทยานิพนธ์ระดับปริญญาเอกตั้งแต่ปี 1980
- ให้ข้อมูลบรรณานุกรมพร้อมสาระสังเขปวิทยานิพนธ์ระดับปริญญาโทตั้งแต่ปี 1988
- ทุกๆ ปีจะมีวิทยานิพนธ์ระดับปริญญาเอกและวิทยานิพนธ์ระดับปริญญาโทเพิ่มขึ้นประมาณ 70,000 ชื่อเรื่อง

Adoption and Use of Internet Technologies in Health Communication: Examining Disparities in Diffusion Patterns, Health Information Sources, and Patient-Provider Encounters

Massey, Philip Minter University of California, Los Angeles, ProQuest, UMI Dissertations Publishing, 2013. 3563351.

Hide highlighting

☐ Abstract (summary)

This dissertation examines the impact of internet technologies on the field of health communication. Access and use of health communication technologies has and will continue to become increasingly important to manage and treat chronic conditions and other ailments, particularly in the context of health care reform that promotes improved quality of care along with cost-saving measures. Through examining internet adoption rates, its use as a source of health information, and its influence on the patient-provider encounter, findings highlight ways in which the internet can be leveraged to help health consumers, health providers, health care organizations, and health insurance companies transition into the digital age of health care and health promotion.

Data from the 2003 and 2008 Health Information National Trends Survey (HINTS) are used to examine online technologies for health communication among U.S. adults. HINTS, a nationally representative repeated cross-sectional survey, is developed and implemented by the National Cancer Institute (NCI) to measure knowledge, attitudes, and practices related to health information and media use, reflecting the growing reliance on internet sources for health and illness information. Three studies based on HINTS incorporating diffusion models and communication theories to describe the use of online technologies for health information and communication are presented.

The first study demonstrates that the largest growing disparity in internet use is among women and men, with women significantly outpacing men between 2003 and 2008. A proposed disparities diffusion model suggests that other disparities in internet use are neither growing nor shrinking - that is, vulnerable populations remain at a disadvantage. The second study shows that internet use for health information continues to grow among both internet users as well as non-users. This suggests that non-users get online health information through surrogates, supporting a "team" approach to health information seeking. The third study demonstrates that

Information processes of health communication and fruit and vegetable consumption: A multi-sample structural equation modeling approach by intervention and colon cancer status groups

Ko, Linda Kyongsuk . The University of North Carolina at Chapel Hill, ProQuest, UMI Dissertations Publishing, 2008. 3315674.

☐ **Abstract (summary)** [Translate](#)

A diet low in fruits and vegetables has been associated with increased risk for colorectal cancer. Health communications with Tailored Print Communication (TPC) and Telephone Motivational Interviewing (TMI) have been shown to be effective in promoting fruits and vegetable consumption (FVC). This study explored the mechanisms underlying TPC and TMI effectiveness among colon cancer survivors and colon cancer-free individuals, guided by the Information Processing Theory.
